Global Crossing **Web Meeting**

SYSTEM REQUIREMENTS

Global Crossing believes web conferencing should be simple and easy to use for everyone, regardless of operating system and browser. Global Crossing Web Meeting offers industry-best platform support for Windows, Mac and Linux operating systems and superior browser support for Internet Explorer, Firefox and Safari.

In addition to cross-platform support, Web Meeting makes it quick and easy for presenters and participants to get into web conferences. The chairperson application takes just seconds to download. The Flash-based participant application requires no download for participants. There's also an alternative participant application for that small group of users – typically around 2% - who may not have Flash installed. With Web Meeting, you can be confident your meetings can get started on time, every time with everyone.

Web Conferencing System Requirements

Chairpersons and co-presenters must do a small (< 3 MB), one-time application download prior to hosting a conference.

Most participants will be able to quickly attend conferences using Web Meeting's Flash-based participant application, which requires no download. For the best conferencing experience, we recommend participants use Flash 9.0.28 or higher. Participants who do not have a compatible version of Flash and cannot install it can join the conference with Web Meeting's alternative participant application which requires Java 1.3.1 or higher. Flash 9.0.28 is recommended for viewing Web Meeting recordings.

In order to ensure that your account is easy to manage and that your slides load more quickly, Global Crossing limits accounts to 200 slides.

For optimal performance, we recommend the following system configurations:

Operating System	Supported Browsers	For Chairpersons & Co-Presenters	For Participants
Microsoft Windows: XP, Vista (32 and 64 bit), 7 (32 and 64 bit)	Internet Explorer (6.0+, 7.0+, 8.0+ 32-bit*) Firefox (3.0+)	Java 1.3.1+ recommended	Flash 9.0.28+ OR Java 1.3.1+ required
Apple Macintosh: OSX 10.4+ (Intel-based processors)	Firefox (3.0+) Safari (3.0+, 5.0+)	Java 1.3.1+ required	Flash 9.0.28+ OR Java 1.3.1+ required
Linux - 2.6+ kernel: 32 and 64 bit; x86 CPU required	Firefox (3.0+)	Java 1.3.1+ recommended	Flash 9.0.28+ OR Java 1.3.1+ required

*Chairperson controls support 32- and 64-bit.
